alternator and clean out. To strip, unseize, rebuild, paint and build up horn compressor, pedal box, and drive shaft parts. To transport body shell to blasters.

To strip bell housing, strip gearbox and clean castings and parts. To strip gears and shafts. To fix stripped studs on main case.

To place engine onto trolley, mount on to stand, and commence engine strip. To record cam timing and lift measurements on all cams, and measure tappet clearances. To make removal tool for intermediate gear bearings and shafts, clean camshafts, buckets and tappet shims. To strip cylinder heads, clean valve springs, bases and retainers, steam clean block and heads, remove pistons and rings from rods, and clean and inspect pistons. To measure piston skirts, bobble hone cylinder bores, clean, polish and measure crankshaft, and measure cylinder bores. To strip oil pump, clean front cover, inlet manifold, gears and sprockets, main caps and bracketry. To chemi-black sump baffle. To strip and clean chain tensioners, clean camshaft covers, check valves in guides for wear, trial fit crank in block, and assemble one piston to rod assembly and fit into block, measure piston volume then strip out again. To measure cylinder head combustion chamber volume, make small end bush tool for removal and fitment. To remove small end bushes from rods and clean up rods, and remove bearings from intermediate gear support. To commence carburettor strip.

tappet shims and measure and adjust valve clearances. To make tool to hold camshaft follower so top lip can be ground down to suit thinner tappet shim, grind four inlet camshaft follower tops, mask up heads fully, prime and paint. To de-mask cylinder heads, torque check bottom end nuts, fit oil baffle plate, strip chain tensioner and replace roller bearings. To re-grease and reassemble bearings, strip distributor internals, replace drive bearing, clean and reassemble. To fettle top bearing support plate in distributor and fully reassemble distributor. To build chain tensioners, reassemble starter motor and solder earth strap back on. To investigate starter not working correctly. To test starter motor fault with solenoid switch, repair solenoid and test. To prepare block top surfaces and cylinder head sealing faces, hylomar head gaskets, prepare head nuts and washers, and fit cylinder heads and camshafts. To re-check and adjust valve clearances and start phasing in camshafts. To fit studs in inlet manifolds, partially strip carburettors and record jet sizes and adjust float heights. To fill carburettors with fuel and test pump circuit as well as check for leaks. To fit carburettors onto inlet manifolds. To set up fuel pipes and make new throttle rod. To release chain tensioners after camshaft set, time in all 4 camshafts, take lift measurements and calculate valve to piston clearances. To torque up camshaft sprocket bolts and fit new clamps on fuel pipe. To fit carburettors and inlet manifolds to engine. To fit studs to the bottom of the block, fit new three lobe camshaft and condenser on distributor, phase points correctly, adjust ignition advance curve by swapping different bob weight springs and fit distributor to engine and time in. To fit front cover timing chest and water pump, cut camshaft gaskets to fit correctly and fit camshaft covers. To repair thermostat housing, shorten end of chain rubbing, strip stud where is fouled on water pipe, and fit thermostat housing. To cut water pipes to length, make up pressure testing kit, fit oil
